

# YOHANNES ABEGAZ

FULL-STACK SOFTWARE DEVELOPER

Addis Ababa, Ethiopia | +251 977 062 985  
[yohannesabegaz63@gmail.com](mailto:yohannesabegaz63@gmail.com) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## PROFESSIONAL SUMMARY

Full-stack developer and Information Systems student who has spent the last couple of years building complete, working systems rather than tutorials — a role-based government reporting platform, an e-commerce marketplace, and an ERP tool that ties departments together. I care most about getting the data model and permissions right before the UI, and I enforce access control server-side, not just in the frontend. Currently sharpening my QA instincts as a Software Testing & Documentation Intern at Get Rest Technologies, and looking for an internship where I can take on real features from week one.

## TECHNICAL SKILLS

|                |                                                                          |
|----------------|--------------------------------------------------------------------------|
| Languages      | JavaScript, TypeScript, Python, Java, C++, C#, PHP                       |
| Frontend       | React, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap                     |
| Backend        | Node.js, Express.js, Django, Prisma, RESTful API design                  |
| Databases      | MongoDB, MySQL                                                           |
| DevOps & Tools | Git, GitHub, Docker, Nginx, Linux                                        |
| Practices      | Agile / Scrum, Role-Based Access Control & Auth Design, Responsive UI/UX |

## EXPERIENCE

### Software Testing & Documentation Intern | Get Rest Technologies

- Tested a hotel-booking web application end-to-end, tracking down functional bugs and confirming fixes before release.
- Wrote a troubleshooting and error-resolution manual for end users and internal teams, turning recurring issues into clear, step-by-step guidance.

## FEATURED PROJECTS

### Yeka Mesob Center Reporting System | Government Digital Services Platform

- Built a role-based reporting system for a multi-institution government service center in Addis Ababa, replacing a manual, Excel-based tracking process with a structured submission-to-approval workflow.
- Modeled four distinct roles — Institution Staff, Approver, Manager, Admin — and enforced every permission on the server, so access control never depended on what the frontend showed or hid.
- Added interactive dashboards with Recharts so managers could track daily, weekly, and monthly service volume, pulled only from approved data.

Tech: React (Vite), React Router, Recharts, Node.js, Express, MongoDB (Mongoose), JWT

### E-Commerce Marketplace | Amazon-Style Full-Stack Application

- Built a full-stack marketplace covering product catalog, cart, checkout, and order management, with secure user authentication and an admin dashboard for inventory and orders.
- Designed the UI mobile-first and responsive, so the same codebase holds up across screen sizes without separate builds.

Tech: React, Node.js, Express, MongoDB, JWT

### Enterprise Resource Planning (ERP) System | Cross-Department Business Platform

- Built an ERP system that brings multiple company departments onto one platform with centralized data and role-based dashboards.
- Kept the data model modular by design, so new departments and modules can be added without disrupting existing workflows.

Tech: React, Node.js, Express, MongoDB / MySQL

### Tipplay | Sportsbook, Casino & Virtual Games Platform

- Built a full-stack betting platform that brings sportsbook, casino, and virtual games together under one wallet, with bilingual (English/Amharic) support and a mobile-first interface.
- Cached live football odds to cut down on external API calls, and wired up real-time wallet webhooks so balances update instantly on wins.
- Designed the mobile UI around a sticky bet slip, live odds ticker, and bottom navigation to keep fast-moving bets easy to place.

*Tech: Next.js 16, React 19, TypeScript, Tailwind CSS, Prisma, NextAuth.js, Zustand*

## ADDITIONAL PROJECTS

---

**Car Management Platform** — Full-CRUD car management app, deployed with Docker behind an Nginx reverse proxy. *React, Tailwind CSS, Node.js/Express, MongoDB, Docker, Nginx*

**Business Web Application Suite** — Multiple internal business platforms with real-time data processing and user management. *Python (Django), MySQL, Bootstrap*

**Netflix Clone** — Movie browsing interface built on the TMDB API. *React*

**Apple Store Clone** — Pixel-perfect, responsive e-commerce UI replica with dynamic routing. *React, Vite*

**Fan Petition Platform** — Full-stack petition and signature-collection site with a live counter. *Next.js, TypeScript, Tailwind CSS, Supabase*

**Currently building:** *Online Course Platform — an e-learning platform in active development.*

## EDUCATION

---

**B.Sc. Information Systems** | *Addis Ababa University* Expected Graduation: 2027

**Relevant Coursework:** Object-Oriented Systems Analysis & Design, Information Systems Security, Administration of Systems & Networks, Mobile Computing, Advanced Internet Programming
